### **Faktor-Faktor Yang Berhubungan Dengan Kepatuhan Perawat Melakukan Dokumentasi Clinical Pathway Sectio Caesarea Di RS X Jakarta 2018**

xvi + 80 Halaman, 18 tabel, 9 lampiran

#### **ABSTRAK**

Kepatuhan seorang perawat dapat dilihat dalam berbagai bidang, salah satunya dokumentasi. Dokumentasi yang dilakukan oleh perawat baik berupa pencatatan asuhan keperawatan dari pengkajian sampai dengan evaluasi salah satunya dengan menggunakan *clinical pathway sectio caesarea*. Terwujudnya kepatuhan perawat dalam pendokumentasian clinical pathway dapat dipengaruhi oleh beberapa faktor baik dari faktor intenal maupun eksternal. Penelitian ini merupakan penelitian kuantitatif, dengan metode *Korelasi* rancangan *Cross-sectional*. Teknik pengambilan data adalah total sampling. Total populasi 35 perawat. Jumlah sampel 35 perawat. Tempat penelitian di Perawatan Lantai 7 RS X Jakarta. Variabel independen meliputi umur, pendidikan, masa kerja, pengetahuan, sikap, motivasi dan faktor eksternal, sedangkan variabel dependen adalah kepatuhan. Analisa data yang digunakan adalah univariat dan bivariat. Hasil penelitian menunjukkan responden yang berusia 31-40 tahun sebanyak 42,3%, responden dengan pengetahuan cukup 51,4%, responden mempunyai sikap positif 82,9%, responden yang memiliki motivasi tinggi 42,9%, responden yang patuh sebanyak 88,6%, dan responden yang memiliki faktor eksternal baik sebanyak 82,9%. Berdasarkan uji *Kendall Tau-b* dan *Kendall Tau-c* diperoleh hasil usia ( $p$ -value 0,877), pendidikan ( $p$ -value 0,156), masa kerja ( $p$ -value 0,658) pengetahuan ( $p$ -value 0,923) yang berarti tidak ada hubungan antara usia, pendidikan, masa kerja, pengetahuan dengan kepatuhan dan dari variabel lain diperoleh hasil ada hubungan antara sikap ( $p$ -value 0,015), motivasi ( $p$ -value 0,020) dan faktor eksternal ( $p$ -value 0,029) dengan kepatuhan perawat melakukan dokumentasi clinical pathway sectio caesarea.

### **Factors Related to Nurse Compliance Documentation Clinical Pathway Sectio Caesarea In RS X Jakarta 2018**

xvi + 80 pages, 18 tables, 9 attachment

#### **ABSTRACT**

A nurse's compliance can be seen in various fields, one of which is documentation. Documentation carried out by nurses in the form of recording nursing care from assessment to evaluation one of them by using clinical pathway sectio caesarea. The realization of nurses' compliance in documenting clinical pathways can be influenced by several factors both from intenal and external factors. This research is a quantitative research, using Cross-sectional Design Correlation method. Data collection technique is total sampling. Total population of 35 nurses. Number of samples were 35 nurses. Place of study in ward 7th floor RS X Jakarta. Independent variables include age, education, years of service, knowledge, attitude, motivation and external factors, while the dependent variable is compliance. Data analysis used is univariate and bivariate. The results showed that respondents aged 31-40 years were 42.3%, respondents with sufficient knowledge 51.4%, respondents had a positive attitude 82.9%, respondents who were highly motivated 42.9%, respondents who obeyed 88, 6%, and respondents who have good external factors as much as 82.9%. Based on Kendall Tau-b and Kendall Tau-c tests, the results of age were obtained (p-value 0.877), education (p-value 0.156), work period (p-value 0.658) knowledge (p-value 0.923), which means there is no relationship between age, education, years of service, knowledge with obedience and from other variables, the results showed a relationship between attitudes (p-value 0.015), motivation (p-value 0.020) and external factors (p-value 0.029) with nurse compliance carrying out clinical pathway sectio caesarea documentation.
