Hubungan Pengetahuan Dan Sikap Dengan Kelengkapan

Pendokumentasian Asuhan Keperawatan Di Ruang Perawatan

Medikal Bedah Rumah Sakit X, Jakarta

X + 91 Halaman, 12 tabel, 7 lampiran

ABSTRAK

Dokumentasi keperawatan merupakan bukti pencatatan dan pelaporan yang dimiliki tenaga keperawatan, sebagai pertanggung jawaban dan pertanggung gugatan asuhan keperawatan yang dilakukan perawat terhadap klien. Tujuan penelitian adalah untuk mengetahui hubungan pengetahuan dan sikap perawat dengan kelengkapan pendokumentasian asuhan keperawatan. Penelitian ini menggunakan metode penelitian kuantitatif dengan desain penelitian deskriptif korelatif dan pendekatan *cross sectional*. Populasi dalam penelitian ini 73 perawat yang bekerja diunit Medikal Bedah RS X Jakarta. Instrumen pengumpulan data berupa kuesioner tentang pengetahuan dan sikap serta lembar observasi kelengkapan dokumentasian keperawatan. Pengambilan sampel menggunakan teknik *purposive* sampling dengan penghitungan jumlah sample menggunakan rumus *slovin* didapatkan 60 responden. Hasil uji bivariat dengan *Kendall Tau B* disimpulkan ada hubungan pengetahuan dengan kelengkapan dokumentasi keperawatan dengan nilai *p value* sebesar 0,000. Ada hubungan sikap dengan kepatuhan dengan *p value* sebesar 0,000. Hasil penelitian ini diharapkan perawat melakukan pendokumentasian asuhan keperawatan dengan lengkap, jelas, akurat dan ringkas di Rumah Sakit X Jakarta.

The Relationship of Knowledge and Attitude with Completeness of Documentation of Nursing Care In Hospital Medical Treatment Room X, Jakarta

+ 91 Pages, 12 tables, 7 attachments

ABSTRACT

Nursing documentation is evidence of recording and reporting that is owned by nursing staff, as accountability and accountability for nursing care performed by nurses to clients. The purpose of the study was to determine the relationship between knowledge and attitudes of nurses with the completeness of documenting nursing care. This study uses a quantitative research method with a descriptive correlative research design with a cross sectional approach. The population in this study were 73 nurses who worked in the Medical Unit of Jakarta X Hospital. Data collection instruments in the form of questionnaires about knowledge and attitudes and observation of documentary completeness of nursing. Sampling using purposive sampling technique with the calculation of samples using the Slovin formula obtained 60 respondents. The results of the bivariate test concluded that there was a relationship of knowledge with the completeness of nursing documentation with a p value of 0,000. There is a significant relationship between attitude with completeness of nursing documentation a p value of 0,000. The results of this study are expected nurses to document nursing care in a complete, clear, accurate and concise manner at the Jakarta X Hospital.

Keywords: Attitude, Knowledge, Documentation Nursing Care
